

Driver telematics app

Simple editing of orders in conjunction with the TC Trailer Gateway, TC Truck or standalone application

Vehicles,
orders and
routes at a
glance

App available for Android™

cargofleet DriverApp

Faster to the target

- » Disposition and order communication
- » Monitoring of trailer data (e.g. temperature, TPMS)
- » Quality assurance of the transported goods
- » Reduction of consumption and wear
- » Truck navigation

CHARACTERISTICS

ADVANTAGES

Effective editing of driving tasks	Smart Order Management, Documentation of all status changes
Reliable communication between office and drivers	No server installation required; Connection to the customer's own IT systems is possible
TruckNavi: Navigation tool with address input and routing vehicle-specific limitations	No en-route surprises through truck-specific navigation
Transmission of trailer data: temperatures, EBS TPMS tyre pressure, brake lining wear, coupling status and refrigerator data (only in conjunction with trailer in the cargofleet Portal)	Knowledge of the overall system increases safety for driver and cargo, and maintains the quality of the load
Installation on select Android-enabled consumer or professional equipment (list of suitable devices available upon request)	Device selection according to your individual requirements; existing apps can be utilised simultaneously
EcoResponse: driving style feedback during driving (only in conjunction with TC Truck)	Less wear and fuel consumption; safe, relaxed and environmentally-friendly driving
Customization of workflow possible on a project basis	Optimal integration into your operational processes

The use of the full range of functions TC Truck or TC Trailer Gateway and compatible interfaces connected systems is presumed. Android is a trademark of Google Inc.
